Scenario

ShopEase is an online shopping platform that allows customers to browse products, manage their cart, and place orders easily from anywhere.

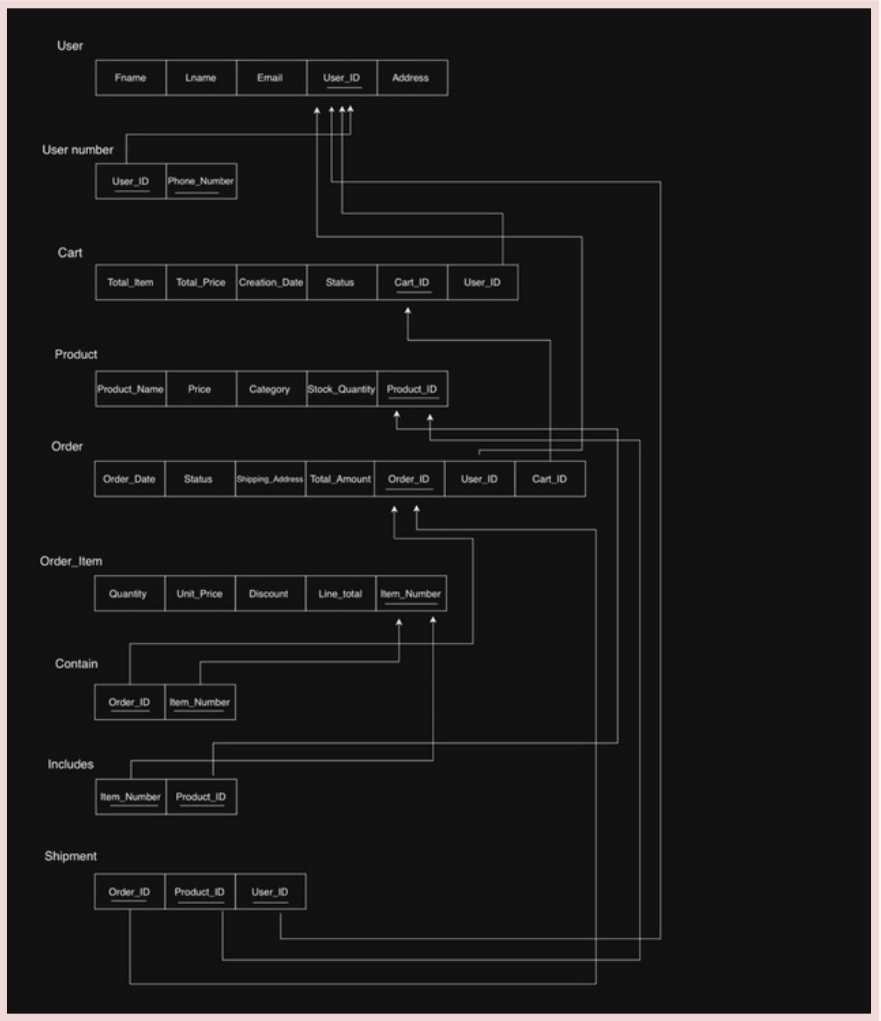

The system starts when a customer registers and creates an account. Once registered, the customer can browse the product catalog and add items to their personal cart. When ready, the customer places an order that includes one or more products.

The system then records the order details and manages the delivery process through a shipment that links the customer, their order, and the products being delivered.
